

Bonding of door panels

Windows & Doors.

Customer benefits:

- Excellent initial tack and stability (cohesion)
- Especially suitable for large-pored material surfaces
- Replaces liquid bondings, so no need to wait for hardening
- Available at up to 1,500 mm material width
- High age-resistance

Products:

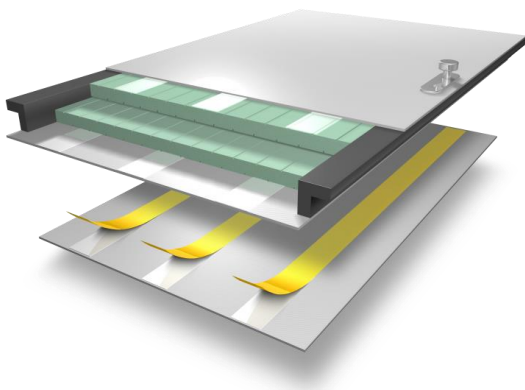

- DuploCOLL® 810
- DuploCOLL® 21696

Bonding of door panels

Windows & Doors.

Depending on the characteristics of the insulating panels, these are bonded with different products:

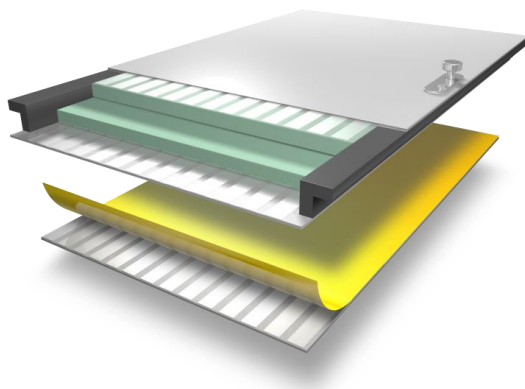

Tape for insulating panels with grooves

DuploCOLL® 810

- Excellent initial tack and stability (cohesion)
- Thanks to the distinctive visco-elastic adhesive property, it is particularly suitable for large-pored material surfaces
- High resistance to distortion
- Good age-resistance
- White paper carrier
- Yellow paper liner

Strip coating for insulating panels with a smooth surface

DuploCOLL® 21696:

- High initial tack
- High adhesive strength, also at low temperatures
- Strip coating with finger lift (20 mm glue / 8 mm glue-free, repeated)
- High age-resistance
- Softener-free polymer dispersion, free from resin additives
- Available at up to 1,500 mm material width
- Yellow paper liner
